Bedeschi S.p.A., founded in 1908 and based in Limena, Italy, is an European company leading in the sector of development, construction and implementation of machinery and plants for the heavy clay ceramics industry.

After over 100 years being active in this business, Bedeschi is certainly the only company on the market that has maintained its technical and economic stability in order to assure continuity and the utmost reliability to its clients. The success of the historical Italian company Bedeschi is being continued with new important projects in Algeria, in North Africa. These new contracts contribute to consolidation of the com-

pany's experience and extent its worldwide references. During 2018, Bedeschi signed a contract with a new client, the well-known bricks producer Sarl Djedei, based in Touggourt. The supply consists of the installation of a new reclaimer BEL F 100/13, completed with belt conveyors to convey bulk material to silos. The machine will be used to reclaim the clay and to feed three production lines. Also on 30 October 2018, Bedeschi has been awarded with a new contract in Algeria from Zahana Cement Company for a double roller crusher model RL 850/1500. Zahana Cement Company is a member of the GICA Group. The contract is on EPC basis and includes:

- supply of the new machine, designed for a hourly processing of 500 t/h of marl;
- removal of the existing machine;
- installation of the new crusher with the revamping of the existing electrical board. Commissioning is expected within the next nine months.
